

Software Programmer at Dynon Instruments

Dynon Instruments is seeking a software programmer to contribute to the development of our exciting product line of PC based instruments and our controller line. Dynon is a small company (in Seattle area) where each person makes a large impact. The position requires someone who can work with people from various disciplines to develop products from concept to market. The right candidate will also be able to follow product specification and contribute to the design process as it relates to the GUI and function of the software.

The ideal candidate will have experience in C++ and .net but a variety of backgrounds will be considered.

Desired Skills/Experience:

- CE/CS bachelor's degree
- 1-2 years experience
- Experience with C++ and .net software development preferred
- GUI
- Knowledge of communication protocols
- Knowledge of embedded digital hardware architectures
- High energy level and work ethic
- Documentation
- Customer service/support may be required
- Database programming a plus as is web experience

Salary depends on experience
